

GS-6000 SERIES

Heavy-duty CNC Turning Centers

www.YAMASEIKI.com

Y·MA SEIKI®
TURNING CENTERS by 

MAXIMUM PERFORMANCE CNC TURNING CENTERS

With leading technologies and high quality components, the GS-6000 series maximum performance turning centers combine high rigidity box way bed with super large diameter servo indexing turret and 2-step gear spindle structure that provides great horse power, high speed indexing, and heavy-duty cutting capabilities. The GS-6000 series is available with optional L² model, with up to 3,300 mm (129.9") turning length and M model, with live tooling turret and C-axis, which enables higher cutting flexibility and multi-tasking power to meet most of today and tomorrow's turning applications demands.

- ▶ The first thing you'll notice inside the door of the GS-6000 series is the massive turret, which boasts a turret disk over 750 mm (29.5") in diameter. Blazing fast indexing times of 1 seconds from station to station and 2 seconds for stations at 180 degrees are achieved with servo indexing technology.
- ▶ Under the covers, you'll find a 45 degree true slant bed with super wide box ways and an enormous 2-speed head stock driven by a 37 kW (50 HP) (30 min.) FANUC motor.
- ▶ Axes rapids are 20 m/min (788 IPM) on X and 24 m/min (945 IPM) on Z, which are 50 ~ 100 % faster than the competitors.
- ▶ Utilizing the most advanced industrial design, the fully enclosed protection covers isolates cutting chips and coolant inside the machine.

- ▶ Available live tooling and C-axis capabilities in the GS-6000 series allows the machine to perform multiple tasks on a work-piece, such as turning, milling, drilling, and tapping. This decreases manpower and cycle time as well as eliminates the accuracy lost when a part is moved from machine to machine. (More on P9.)

- 3 bed lengths and 3 spindle sizes offer a total of 9 basic model configurations.

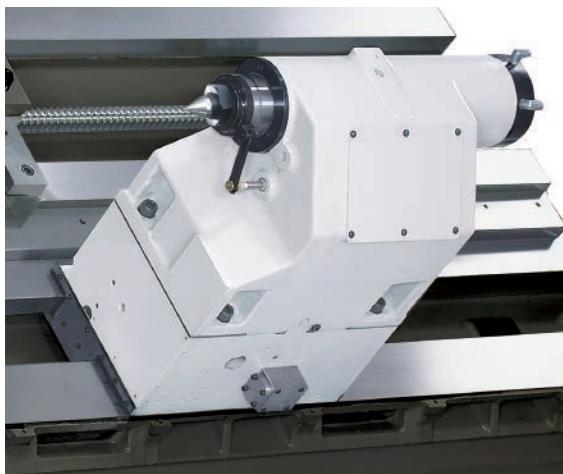

SERIES		GS-6000 SERIES	GS-6600 SERIES		GS-6800 SERIES
Chuck Size		Ø 15" (18")	Ø 20"		Ø 22" *1
Bar Capacity		Ø 115 mm (4.52")	Ø 180 mm (7.08")	Ø 205 mm (8.07")	Ø 260 mm (10.24")
Turning Length	950 mm (37.4")	GS-6000 / M	GS-6600 / M		GS-6800 / M
	1,980 mm (77.95")	GS-6000L / LM	GS-6600L / LM		GS-6800L / LM
	3,300 mm (129.9")	GS-6000L ² / L ² M	GS-6600L ² / L ² M		GS-6800L ² / L ² M

「M」model for optional live tooling turret function.

*1 Optional Air Chuck

(GS-6000L² model shown with optional accessories)

- Positioning of the programmable base tailstock has been simplified through use of custom software interface. The Z-axis carriage automatically locks on to the base of the tailstock and drags it to the desired position.
- The built-in bearing quill provides greater rigidity for heavyloads. The extension and retraction of the quill is programmable and thrust pressure adjustable.

SUPER HEAVY-DUTY CONSTRUCTION

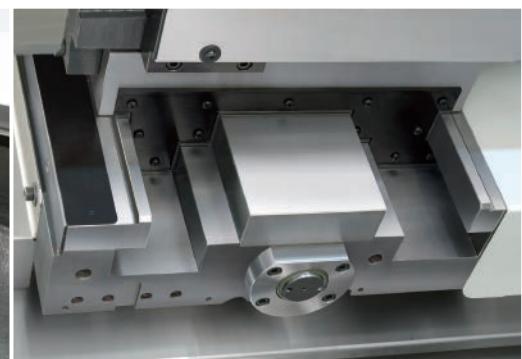

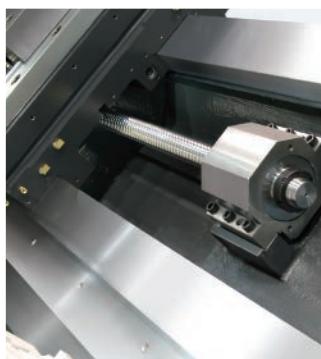

- ▶ Major structural components have been combined into one solid platform. The low center of gravity 45° slant bed design provides the most rigid foundation possible for the headstock, turret, and tailstock.
- ▶ By using Finite Element Methods (FEM), optimally reinforced ribbings are directly cast into the one-piece bed structure. Mechanical rigidity has been increased by more than 40 % when compared to conventional designs. The GS-6000 series is capable of performing super heavy-duty turning and maintain long-term super high precision accuracy. More rigidity also means extended tool life.
- ▶ Built to endure years and years of rigorous high production turning, the heavily ribbed, one-piece thermally balanced bed and casting components are of FC35-MEEHANITE casting (industry standard is FC25~30). FC35 grade cast iron is capable of withstanding much greater stress without deformation and provides maximum vibration damping, which results in a machine that will outlast and outperform the competition.

- ▶ The 2-step super heavy-duty gear head incorporates advanced mechanical designs. Mated with a 37 kW (50 HP) (30 min.) motor to provide tremendous amount of low-end torque to handle heavy material removal on large diameter parts.

- ▶ Extra wide hardened and ground box ways are directly formed into the machine bed and saddle during the casting process. They are precision machined and widely spaced for maximum strength. The box way design also provides the rigidity needed for heavy-duty and interrupted turning applications.

- ▶ C3 class hardened and precision ground ball screws ensure the highest accuracy and durability possible. Plus, pretension on all axes minimizes thermal distortion.

- All spindle and servo motors, including drives, are FANUC αi series components to ensure peak machining performance and accuracy.

(Casting structure of GS-6000L² model shown)

- The L² series Z-axis equipped with independent supporting mechanism prevents long sized ball screws from deforming and ensures excellent performance for the axial feed and turning accuracy.

► Both gears and bearings are lubricated and cooled by an oil mist system, which evenly and efficiently lubricates the components. This system is much more advanced compared to the traditional oil bath system by eliminating the chance of oil contaminating the bearings.

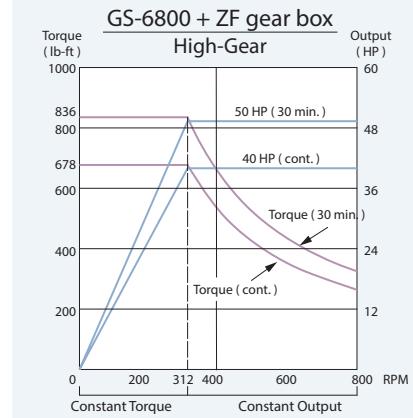

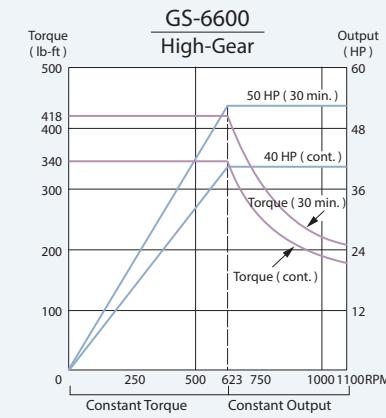

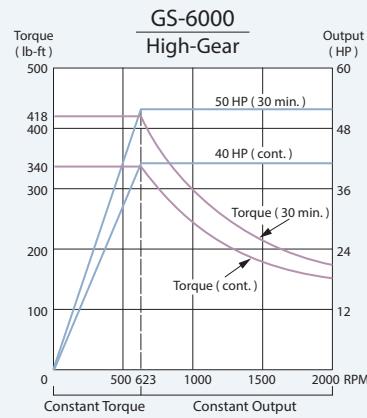

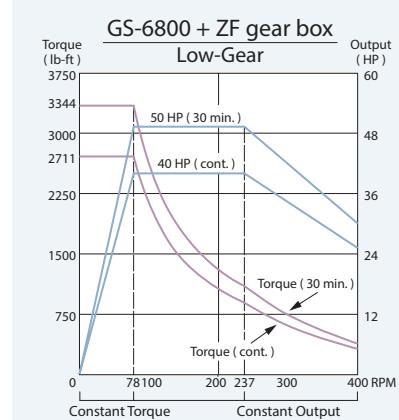

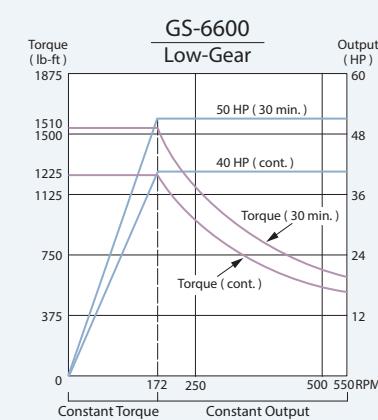

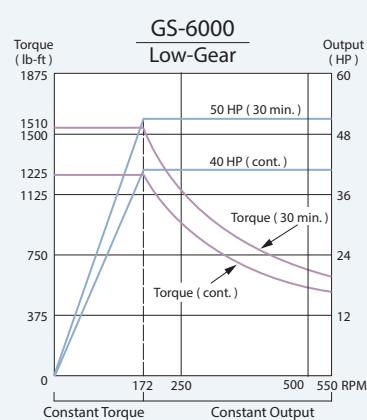

ULTIMATE TURNING POWER

- ▶ P4 grade (Class 7) super high precision bearings are directly assembled for maximum level of support and precision. Bearing configuration is designed for heavy-duty cutting with ultra smooth performance and long term durability with higher level of accuracy.
- ▶ With over 2,048 N·m (1,510 lb·ft) of torque available on low speed of the 2-step gear head, turning tough material with big diameter is now a simple task.

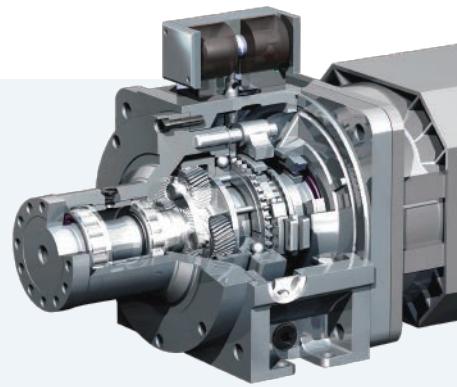

- ▶ Working with the live tooling turret, the Cf-axis and disk brake system enables the machine to perform multiple tasks, such as drilling, tapping and milling operations including cylindrical and polar coordinate interpolations, resembling a 4th-axis rotary table on a machining center.

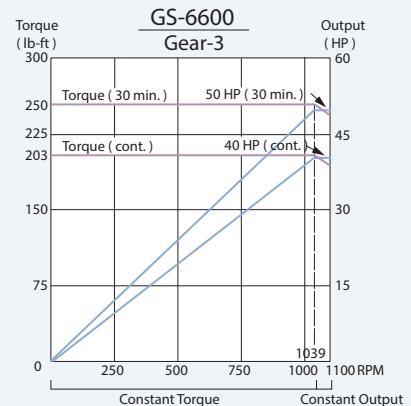

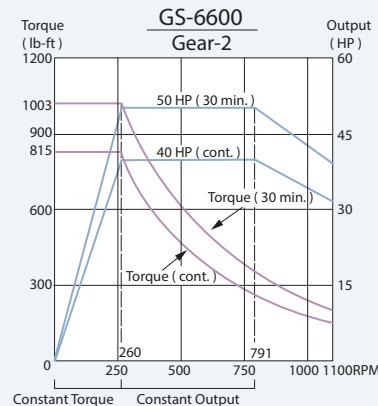

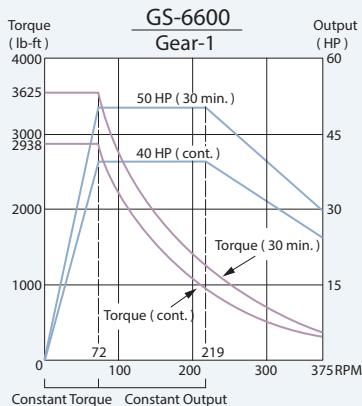

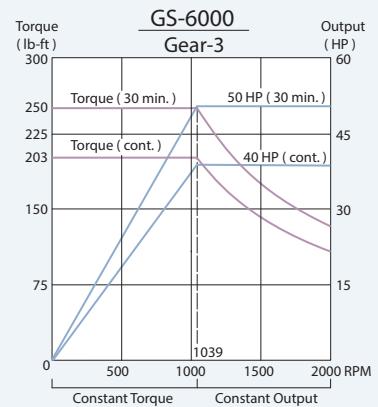

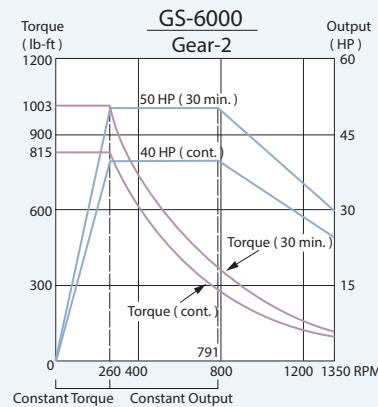

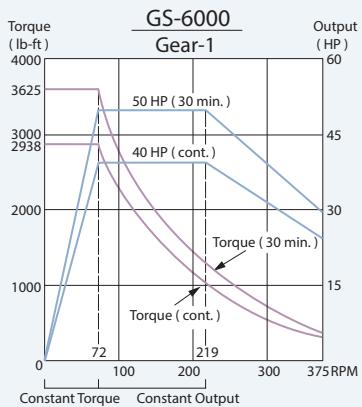

Spindle Output

- The GS-6000 series is standard with a 2-step gear box.
 Optional oil bath German made ZF 3-step gear box is also available providing maximum torque up to 4,912 N-m (3,625 lb-ft).

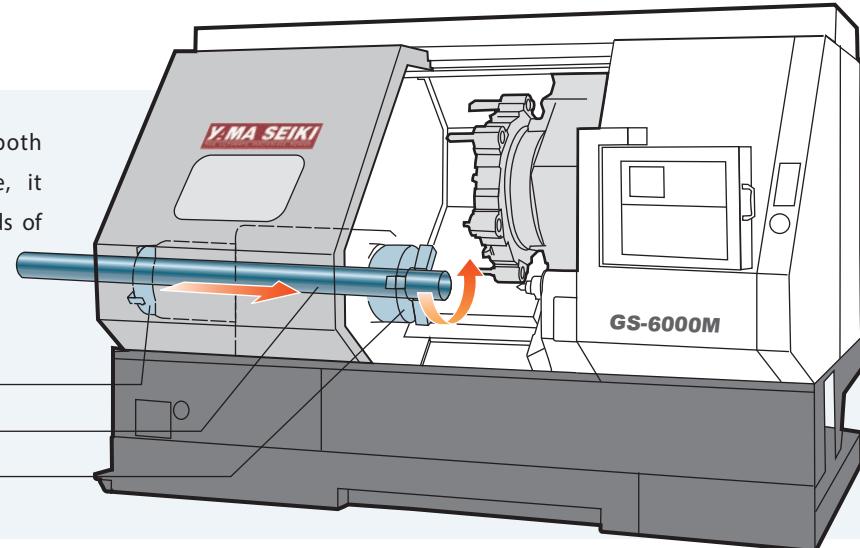

Optional ZF Gear Box Output

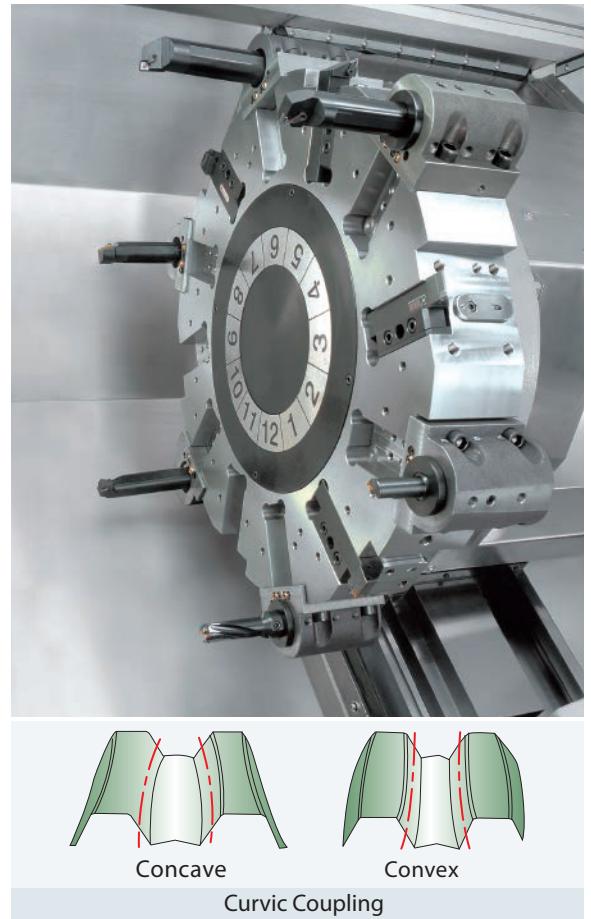

Front + Rear Chuck

By installing air or manual chucks on both the front and rear of the spindle, it becomes possible to machine the ends of long work-pieces. This configuration is especially useful in threading pipes.

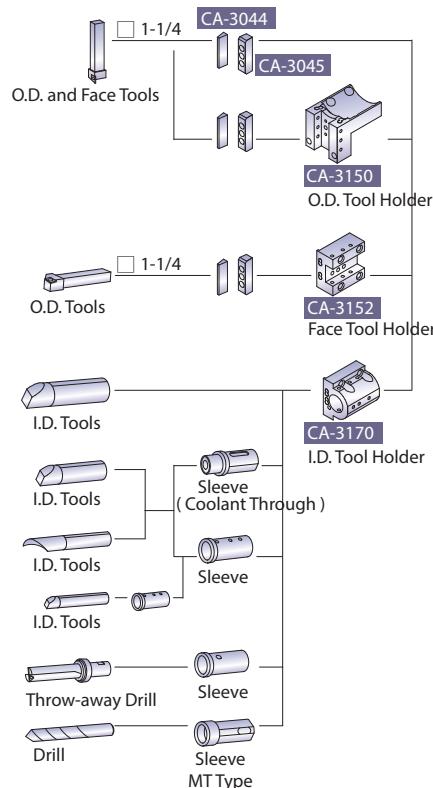

ADVANCED TURRET TECHNOLOGY

- ▶ While competitors are cutting cost by using straight couplings on their turrets, we insist on using the finest curvic couplings available. The curvature of the curvic teeth provides a very unique self-centering feature and wider uniform tooth contact throughout all the teeth, therefore, achieving very high accuracy and rigidity. The curvic teeth are hardened to HRC 58, which ensures the coupling retains its high accuracy characteristics over long periods of use.
- ▶ Ø 450 mm (17.7") diameter super high precision curvic couplings accurately position the turret disk (± 2 sec. of arc) and 12,000 Kg (26,400 lb) of clamping force ensures abundant turret rigidity for all cutting conditions.
- ▶ The 12-station heavy-duty servo indexing turret achieves 1 second indexing times for adjacent stations and 2 second times for stations at the opposite end of the disk turret. Index movements are continuous without pauses, and are capable of turning Ø 375 mm (14.7") diameter work-pieces without interference when using boring tools. The optional 8-station turret clears up to Ø 540 mm (21.2") diameter.

LIVE TOOLING TURRETS

- ▶ Live tooling and C-axis control capabilities on the GS-6000 series allows the machine to perform multiple tasks on a work-piece, such as turning, milling, drilling and tapping. It decreases manpower and cycle time, as well as eliminates the loss of accuracy that would occur when a part is moved from machine to machine.
- ▶ More powerful than a standard 50-taper machining center, the GS-6000 series live tooling turret is driven by 9 kW (12 HP) (30 min.) AC double wound high torque spindle motor to provide ample power, now, even the toughest jobs may be tackled without a sweat.
(Please see page 12 for motor specification)
- ▶ The 12-station YAMA SEIKI live tooling turret offers 12 stations available for live tooling; live tools rotate in working position only to reduce power loss and heat.
- ▶ YAMA SEIKI live tooling turret utilizes advanced servo indexing technology to achieve 1 seconds indexing time for adjacent stations and 2 seconds for stations at the opposite end of the disk.

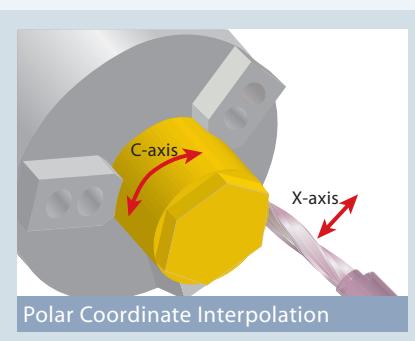

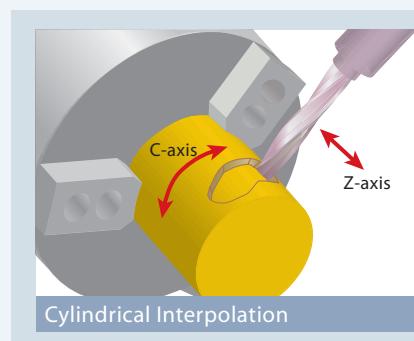

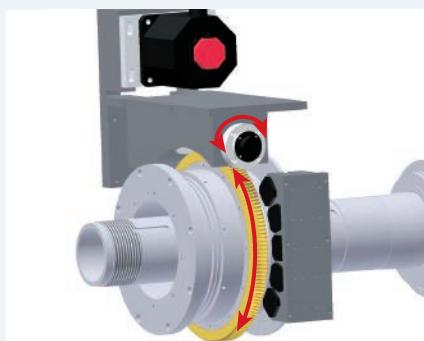

ULTIMATE C-AXIS SPINDLE

- ▶ The Cf-axis and disk brake system available on the GS-6000 series provide the most rigid and powerful type of C-axis on the market today. In Cf-axis mode, a servo motor is engaged and drives the rotation of the spindle; engaging time is approximately 1 second.

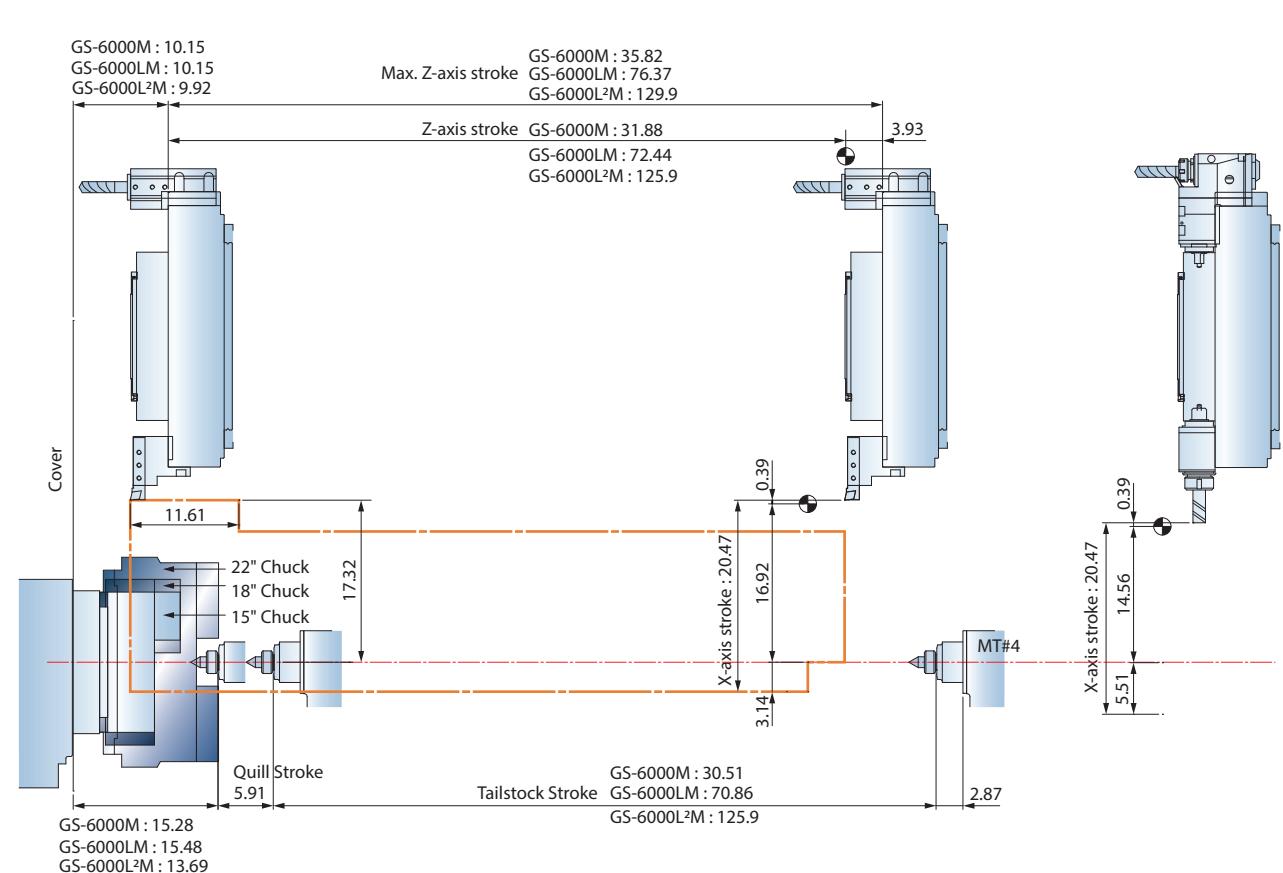

- ▶ Working with the live tooling turret, the Cf-axis and disk brake system enables the machine to perform multiple tasks, such as drilling, tapping, and milling operations, including cylindrical and polar coordinate interpolations, resembling a 4th-axis rotary table on a machining center.
- ▶ With the FANUC servo motor generating an ultra high resolution of 1,000,000 pulses per spindle rotation and 1,800 N·m (1,327 lb·ft) of spindle torque (Cont.), machined surface finishes are much superior than Cs-axis (driven by spindle motor) equipped machines. Plus, dynamic accuracy is within ± 0.02° even under heavy cutting loads.

YAMA SEIKI Multi-tasking machine can perform the functions below in one setup :

Sample Work-pieces

FEATURES

【 Standard Features 】

Chip Conveyor

- The standard chip conveyor features adjustable timers that allow the operator to set operation intervals according to the amount of chips generated by the machine. Thus, reducing coolant loss to minimum.

Separate Coolant Tank

Tri-color status light

【 Optional Features 】

3-Jaw chuck w/ Soft Jaws x 1 set

Air Chuck

- The air chuck can work with soft or thin materials to prevent from deforming rather than using a hydraulic chuck.

Manual Steady Rest

Hydraulic Steady Rest

Steady Rest (Apply for Long Work-piece)

- The manual steady rest is adjusted manually which increases accuracy and requires less space than hydraulic steady rests.

- The automatic steady rest is controlled by a program which increases working efficiency.

Tcode	LOAD MONITOR	SETTING	1/4	UNIT: %	
	AXIS	INITIAL	CURRENT	LIFE	BREAK
1	0000 SP Z	0 0	0 0	0 0	0 0
2	0000 SP Z	0 0	0 0	0 0	0 0
3	0000 SP Z	0 0	0 0	0 0	0 0

NUM-
(TECH)(MONI)(CAN)()

Load Monitoring

- The load monitoring function is used to detect abnormal load of tools by monitoring the variation in spindle motor and servo motor loads during the cutting process. When abnormal loads are detected, the machine will stop at program end (M30) or immediately (feed hold status) according to tool life value or tool break value respectively.

Oil Skimmer

- The optional oil skimmer removes lubrication oil from the coolant tank, thus, keeping the coolant fresh and minimizes manual cleaning.

Tool Setter

- The optional RENISHAW HPRA tool presetter simplifies machining setup.
